

# CSO/Retention Basin Public Notification Plan

## Signage:

Will be placed at the foot of White Creek that describes the retention basin discharge as follows. **TREATED CSO WASTEWATER DISCHARGE, CITY OF NORWAY, NPDES PERMIT # MI0020214, OUTFALL 003A, CONTACT No. 906-563-9961 X 400** . To assure this sign remains intact, the sign will be examined and maintained on quarterly basis.

## CONTACTS:

There is no public access of, or public contact with, the receiving water of White Creek. White Creek eventually ends up in the Menominee River which is south of the CSO/Retention Basin Discharge.

The contacts are the local newspaper, D.E.Q. , and Health department, which all receive the same DEQ notification form with the discharge date, start time, discharge location, the receiving stream name, and all possible public contact points, if any. Contacts are notified **within 4 hours** from when the initial discharge begins, and all notified parties will receive the same updated notification form with the approximate time the discharge ends, **within 7 days**. The Retention Basin total discharge is measured on pump capacity verses time from the beginning of the discharge to the completion of the discharge recorded as Million Gallons per Day (M.G.D.)

Public notification of this plan will be provided through the City of Norway's WEB site at [Norwaymi.gov](http://Norwaymi.gov) and the EPA will receive an **annual report each year** to indicate if there was a discharge during that time and volume of discharge at [NPDES\\_CS0@epa.gov](mailto:NPDES_CS0@epa.gov)

**The Dickinson Health Department director, Daren Deyaert, was contacted for comment on the Notification plan.**

I have reviewed the CSO notification plan for the City of Norway. I found no corrections needed to the plan. 6/15/18
